a
coherent
fock
thermal
squeezed
probability
electron order n
b
coherent
fock
thermal
squeezed
probability
photon number m
c
photon number m
electron order n
d
electron herald n
interaction area
e
coherent
fock
squeezed
entropy [bits]
mean photon number
f
$\bar{m}_{\mathrm{cond}} = 6.80$
$g^{(2)}_{\mathrm{cond}}(0) = 1.00$
probability
input coherent state
conditioned on $n = +2$ (success=0.18)
photon number m
